Rear view camera

Maximum comfort and safety for the operator

To further increase the **comfort** and **safety** of Comac floor scrubbers, a **rear view camera** can be installed on larger ride-on models.

This is a camera **installed on the rear of the floor scrubber** which aids the operator, allowing him or her to check for any obstacles in maximum safety when moving in reverse.

The rear view camera is an excellent means of support for the prevention of accidents when using the floor scrubbers.

Furthermore, with a convenient **swipe** in work mode, the operator can **check the cleaning performance** whilst remaining comfortably in position, **without having to look in the opposite direction** to the direction of travel.

BENEFITS

- Prevention of any accidents that could occur during the use of floor scrubbers
- Protection of the operator and any people who may be in the vicinity of the floor scrubber
- Reduced operator effort, enabling him or her to work safely without having to turn around to check the cleaning performance or the presence of any obstacles
