Eco Mode

The Comac technology for the reduction of noise that allows resources to be saved and waste to be reduced

The cleaning operations performed with a floor scrubber in ECO Mode enable a reduction in the amount of water, detergent and pressure delivered.

This work mode thus reduces waste of water, detergent and energy, by using only the quantities necessary. In addition, the ECO Mode function allows the **noise level of the floor scrubber to be reduced**, thus making it suitable for performing silent operations that are focused on saving energy and increasing working autonomy.

The very low sound pressure levels enable the machine to work in sensitive environments and in the presence of people, such as in **nursing homes and hospitals**, without disturbing those who live and work in the surrounding area.

IT ALLOWS THE NOISE LEVEL OF THE FLOOR SCRUBBER TO BE REDUCED, THUS MAKING IT SUITABLE FOR PERFORMING SILENT OPERATIONS.

BENEFITS

- Reduction in the noise level produced by floor scrubbers, so these can also be used to work in sensitive environments and in the presence of people
- Reduced waste of water, detergent and energy
- Energy savings and subsequent increase in the working autonomy of the floor scrubber
- Coverage of a wider surface thanks to the optimization of the use of resources and the reduction in consumption
