Intelligent turbine support

The technological solution by Comac that allows easy access to the filter

One of the operations that must be considered when purchasing a vacuum cleaner is the **accessibility of the filter compartment** and the ease of cleaning this.

While there are various technological solutions for cleaning, the accessibility is often impeded by the very structure of the vacuum cleaner. This is why Comac has completely redesigned the tanks of the TO range. Via convenient hinges and a lifting/lowering lever, **the vacuum cleaner can be fully disassembled without having to lift the turbine**, an operation that in some cases was only possible using a forklift.

Comac has always been committed to producing machines that are easy to use but also simple to maintain, without overlooking operator comfort.

VIA CONVENIENT HINGES AND A LIFTING/LOWERING LEVER, THE VACUUM CLEANER CAN BE FULLY DISASSEMBLED WITHOUT HAVING TO LIFT THE TURBINE.

BENEFITS

- Ease of access to the filter
- Simplified maintenance
- Zero effort to disassemble the vacuum cleaner
- Turbine always in place

Intelligent turbine support is available for:

CA TO

COMAC S.p.A. Via Maestri del Lavoro, 13 - 37059 Santa Maria di Zevio - Verona - ITALY
