Lithium battery

Lightweight, these batteries can be recharged whenever desired and are always ready to use

These batteries are extremely **light** and **easy to transport**, and can be placed in any position. Furthermore, **they do not require maintenance**, and can be charged anywhere, with no need for special considerations.

With an **extremely fast charging cycle**, lithium batteries do not self-discharge and are thus always ready whenever and wherever they are required; they can therefore be used multiple times in the space of a single day.

This technology makes it possible to reduce the use of energy required from the power supply.

GUARANTEED CONSISTENT PERFORMANCE AND FULL POWER UNTIL FULL DISCHARGE.

BENEFITS

- Guaranteed consistent performance and full power until full discharge
- Charge maintained for very long periods compared to traditional batteries
- Recharge whenever desired without having to worry about the annoying "memory effect" that affects traditional batteries
- They are generally free from heavy metals, which are highly damaging to the environment, such as cadmium
- The charge of a lithium battery has a very high efficiency in 1 hour, an ion battery can be charged to 50%
- A lithium battery is three times lighter than a lead battery
