TOUCH

Touch Screen Display

The intelligent interface for intelligent machinery

With its latest-generation products, Comac offers the option of having a touch screen display on board the machine.

There are many advantages of this technology; indeed, the display could be described as a true “**function enabler**”. With just a **touch** or **gesture**, it is possible to change the operating parameters and check the operating status of the machine. The displays are perfectly integrated into the design of the machines and are located in areas where they are convenient yet protected.

For example, on floor scrubbers equipped with touch screen, with just a touch, the operator can selected whether to work in **Eco**, **Standard** or **Plus** mode. Each of these modes uses a certain amount of water, detergent and pressure, so that the machine can be used in an efficient manner in different cleaning conditions; this avoids waste and saves water, reduces consumption when possible, and increases the cleaning power where necessary.

In machines equipped with rear view camera, with a simple **swipe**, the operator can **view the rear of the machine** to check the result of the cleaning operation and/or **maneuver in total safety** without the risk of colliding with objects.

Finally, the operator can watch the **video tutorials** for the correct maintenance at the end of the work shift, making the operation easier and allowing it to be carried out even by operators who do not normally use the machine.

BENEFITS

- User-friendly
- Less training necessary in order to use the floor scrubber
- Selection of the mode in a single touch
- On board video tutorials
